

Say Hello to Climate Friendly Banking

Clean Energy Credit Union is a not-for-profit, federally chartered credit union that focuses exclusively on providing loans for clean energy and energy saving projects.

Our vision is a world where everyone can participate in the clean energy movement. We are making this a reality by:

making it easier for everyone to afford clean energy and energy-saving products and services by offering clean energy loans with amazing terms

making it easier for everyone to invest in the clean energy movement by offering a variety of deposits accounts

Our online-only business model allows us to service members throughout the country with ease. And our member service and loan team members are available via chat, email, and phone to answer any questions and support members as needed.

We also provide a variety of self-service tools such as:

- Online and mobile banking
- Access to 32,000+ MoneyPass® shared ATM machines
- Shared branching services through thousands of partner credit unions across the U.S.

Since we are a cooperative, we are democratically owned and controlled by our members on a one-vote-per-member basis. This enables us to serve our mission and our members rather than stockholders, passing on dividend payouts and significant savings to members.

Join us in supporting the clean energy movement. Together, we can make a difference for our environment and our economy. Visit cleanenergycu.org to learn more or to get started.
